

# Final Presentation

## MLB: Automatic Strike Zone

---

Devon Goetz, Zack Kopstein, Simran Pabla, Claire Wichman

May 12, 2020

Quantify the impact of an  
automatic strike zone. <sup>3</sup>

# Approach and Methodology

- Classify mistakes
- Compare existing innings
- Create predictive algorithm
- Analyze differences

# Approach and Methodology

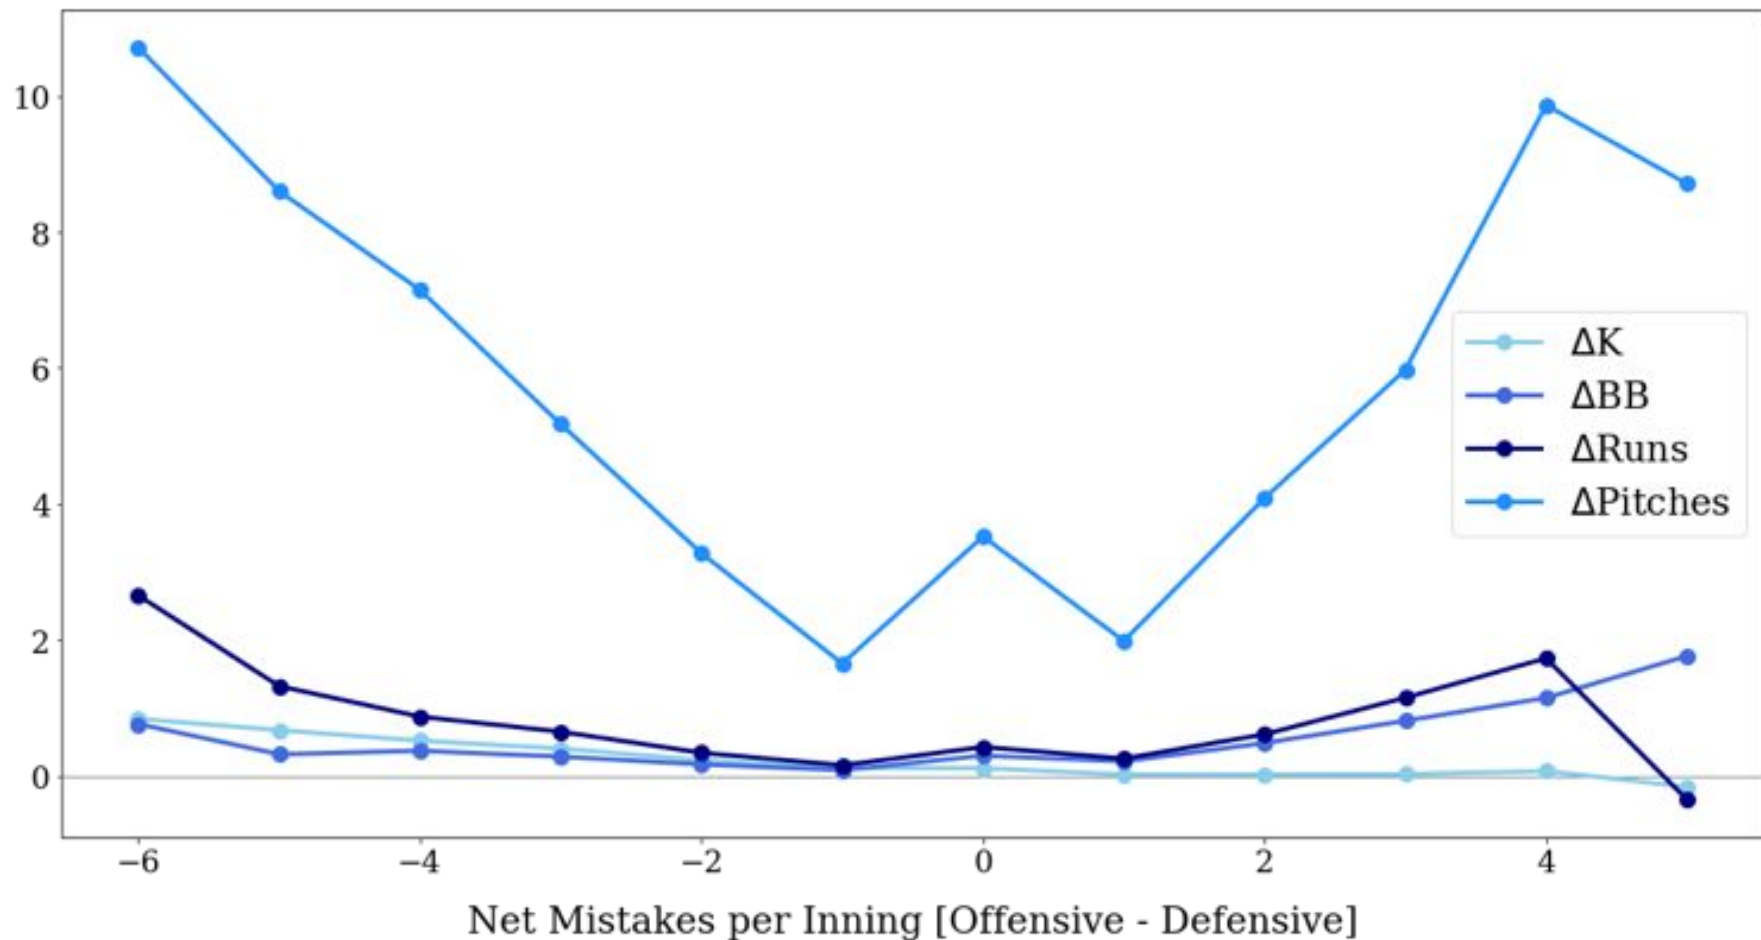

- **Classify mistakes**
- **Compare existing innings**
- Create predictive algorithm
- Analyze differences

# pitches are driving our metrics

Note:  $\Delta$  values calculated as [X Mistake Inning Average - 0 Mistake Inning Average]  
 Non-bolded statistics have a p-value of greater than 0.05, and thus have been deemed statistically insignificant.

Metrics Across Net Mistakes

Metrics Across Net Mistakes

better for defense

# Net Mistakes per At Bat [Offensive - Defensive]

better for offense

Note:  $\Delta$  values calculated as [X Mistake Inning Average - 0 Mistake Inning Average]

Non-bolded statistics have a p-value of greater than 0.05, and thus have been deemed statistically insignificant.

# favorable mistakes have a greater impact

At Bat Metrics Across Net Mistakes

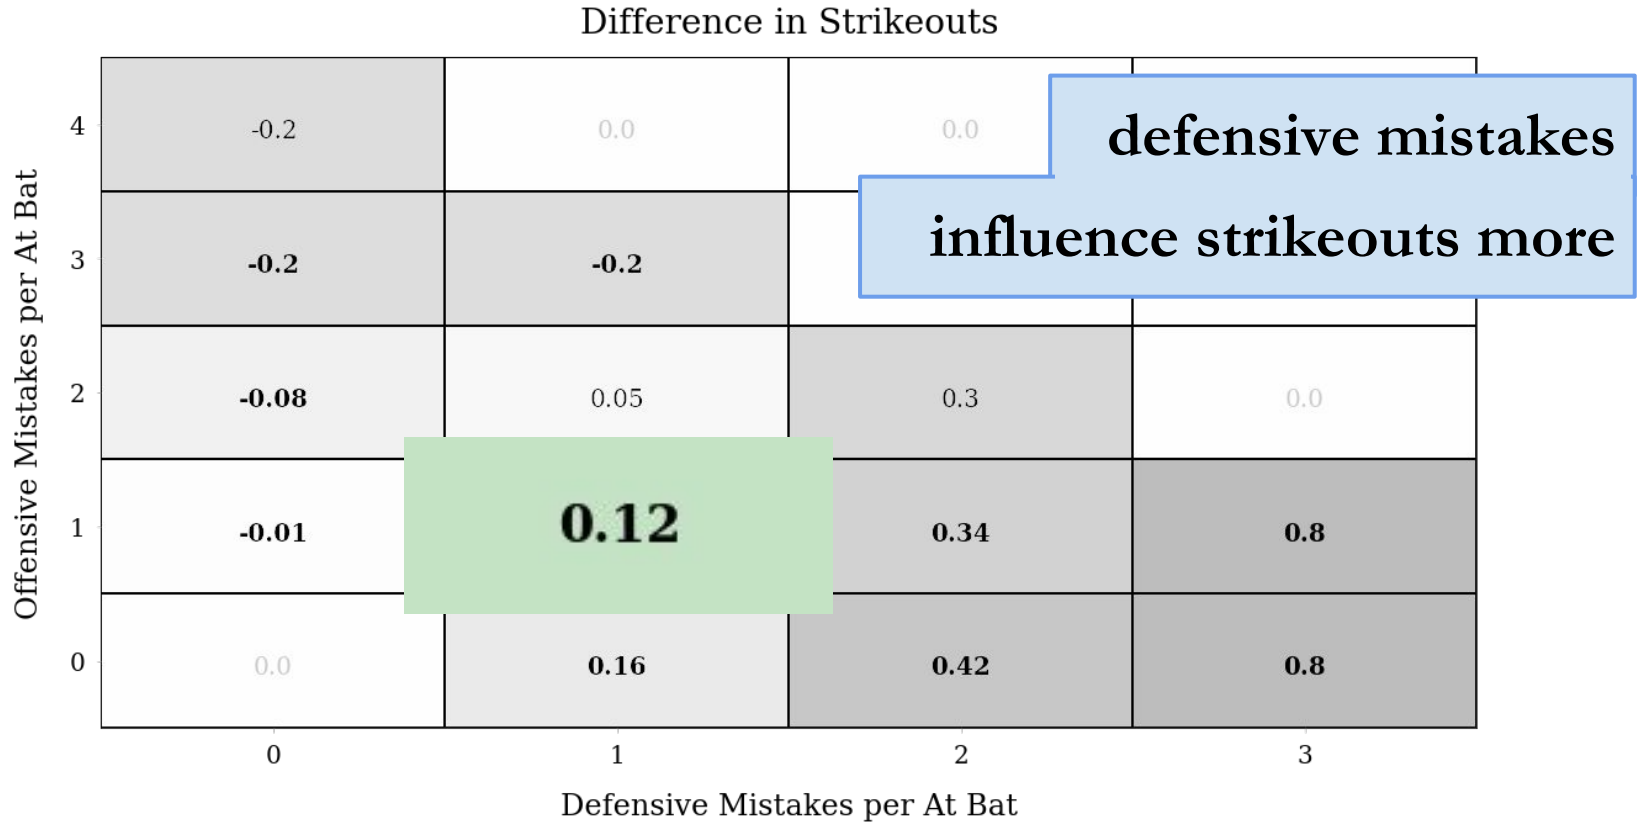

### Difference in Strikeouts

4	-0.2	0.0	0.0	0.0
3	<b>-0.2</b>	<b>-0.2</b>	0.0	0.0
2	<b>-0.08</b>	0.05	0.3	0.0
1	<b>-0.01</b>	<b>0.12</b>	<b>0.34</b>	<b>0.8</b>
0	0.0	<b>0.16</b>	<b>0.42</b>	<b>0.8</b>
	0	1	2	3
	Defensive Mistakes per At Bat			

Note:  $\Delta$  values calculated as [X Mistake At Bat Average - 0 Mistake At Bat Average]

Non-bolded statistics have a p-value of greater than 0.05, and thus have been deemed statistically insignificant.

Note:  $\Delta$  values calculated as [X Mistake At Bat Average - 0 Mistake At Bat Average]

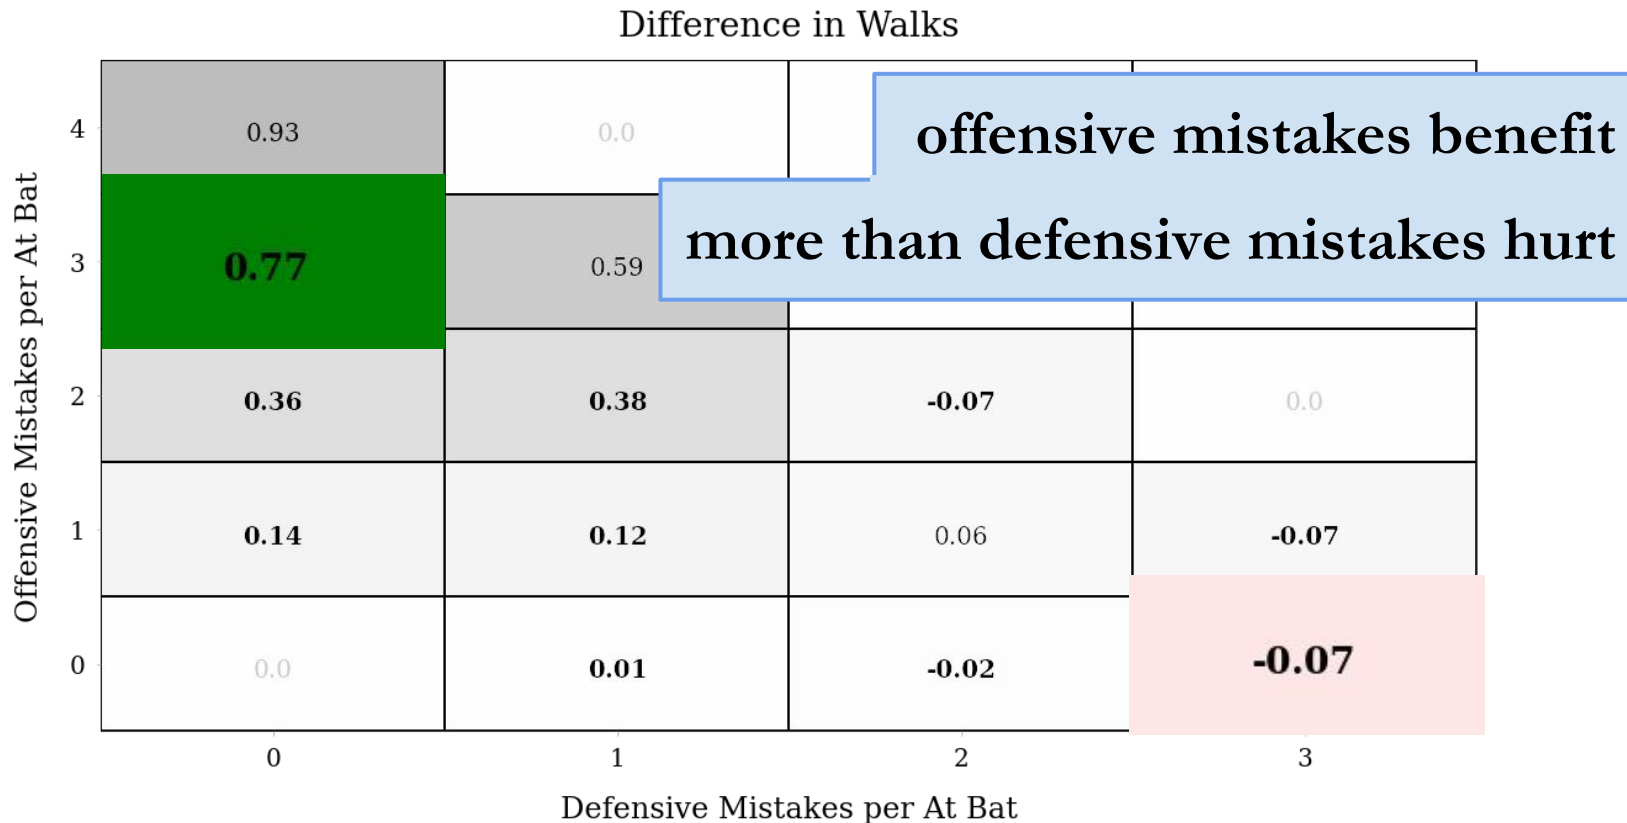

Non-bolded statistics have a p-value of greater than 0.05, and thus have been deemed statistically insignificant.

### Difference in Walks

4	<b>0.93</b>	0.0	0.0	0.0
3	<b>0.77</b>	0.59	0.0	0.0
2	<b>0.36</b>	<b>0.38</b>	<b>-0.07</b>	0.0
1	<b>0.14</b>	<b>0.12</b>	0.06	<b>-0.07</b>
0	0.0	<b>0.01</b>	<b>-0.02</b>	<b>-0.07</b>
	0	1	2	3
	Defensive Mistakes per At Bat			

Note:  $\Delta$  values calculated as [X Mistake At Bat Average - 0 Mistake At Bat Average]

Non-bolded statistics have a p-value of greater than 0.05, and thus have been deemed statistically insignificant.

Note:  $\Delta$  values calculated as [X Mistake At Bat Average - 0 Mistake At Bat Average]  
 Non-bolded statistics have a p-value of greater than 0.05, and thus have been deemed statistically insignificant.

# Approach and Methodology

- Classify mistakes
- Compare existing innings
- **Create predictive algorithm**
- **Analyze differences**

3 - 2, 1 out  
H 2 - 0 A

3 - 2, 1 out  
H 2 - 0 A

{ fly out ..... 0.12  
strike out ..... 0.10  
ground out (FC) .. 0.07 }

{ single, runner advances .. 0.09 }

{ triple ..... 0.05 }

0 - 0, 2 outs  
H 2 - 0 A

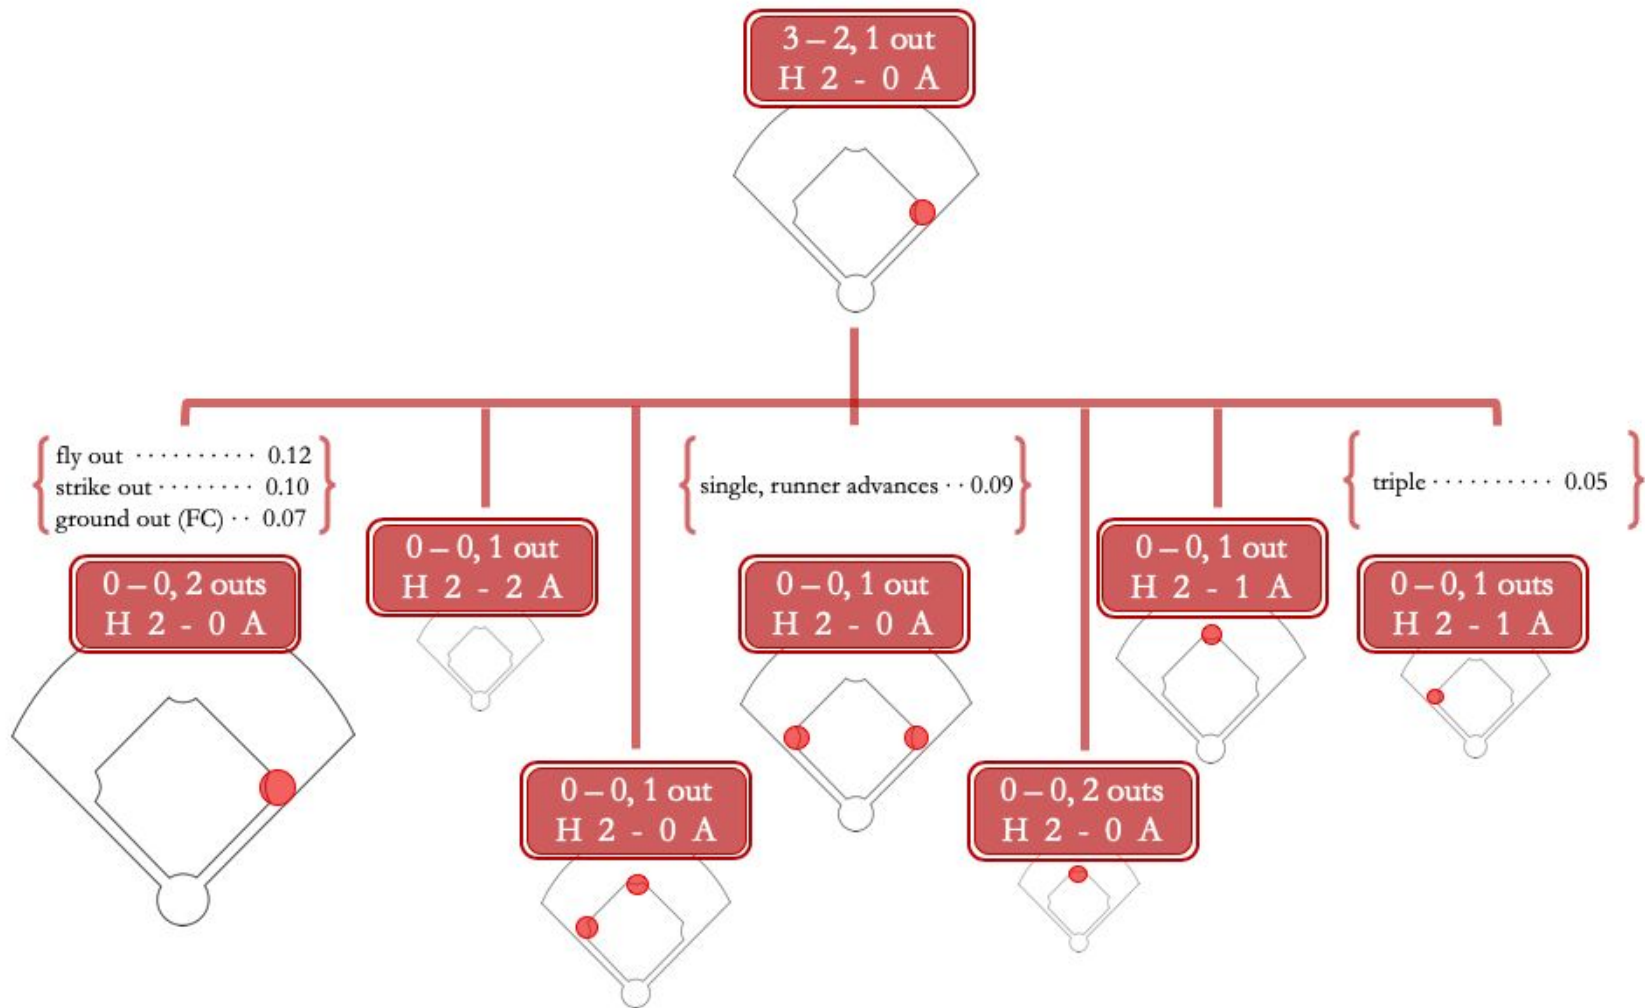

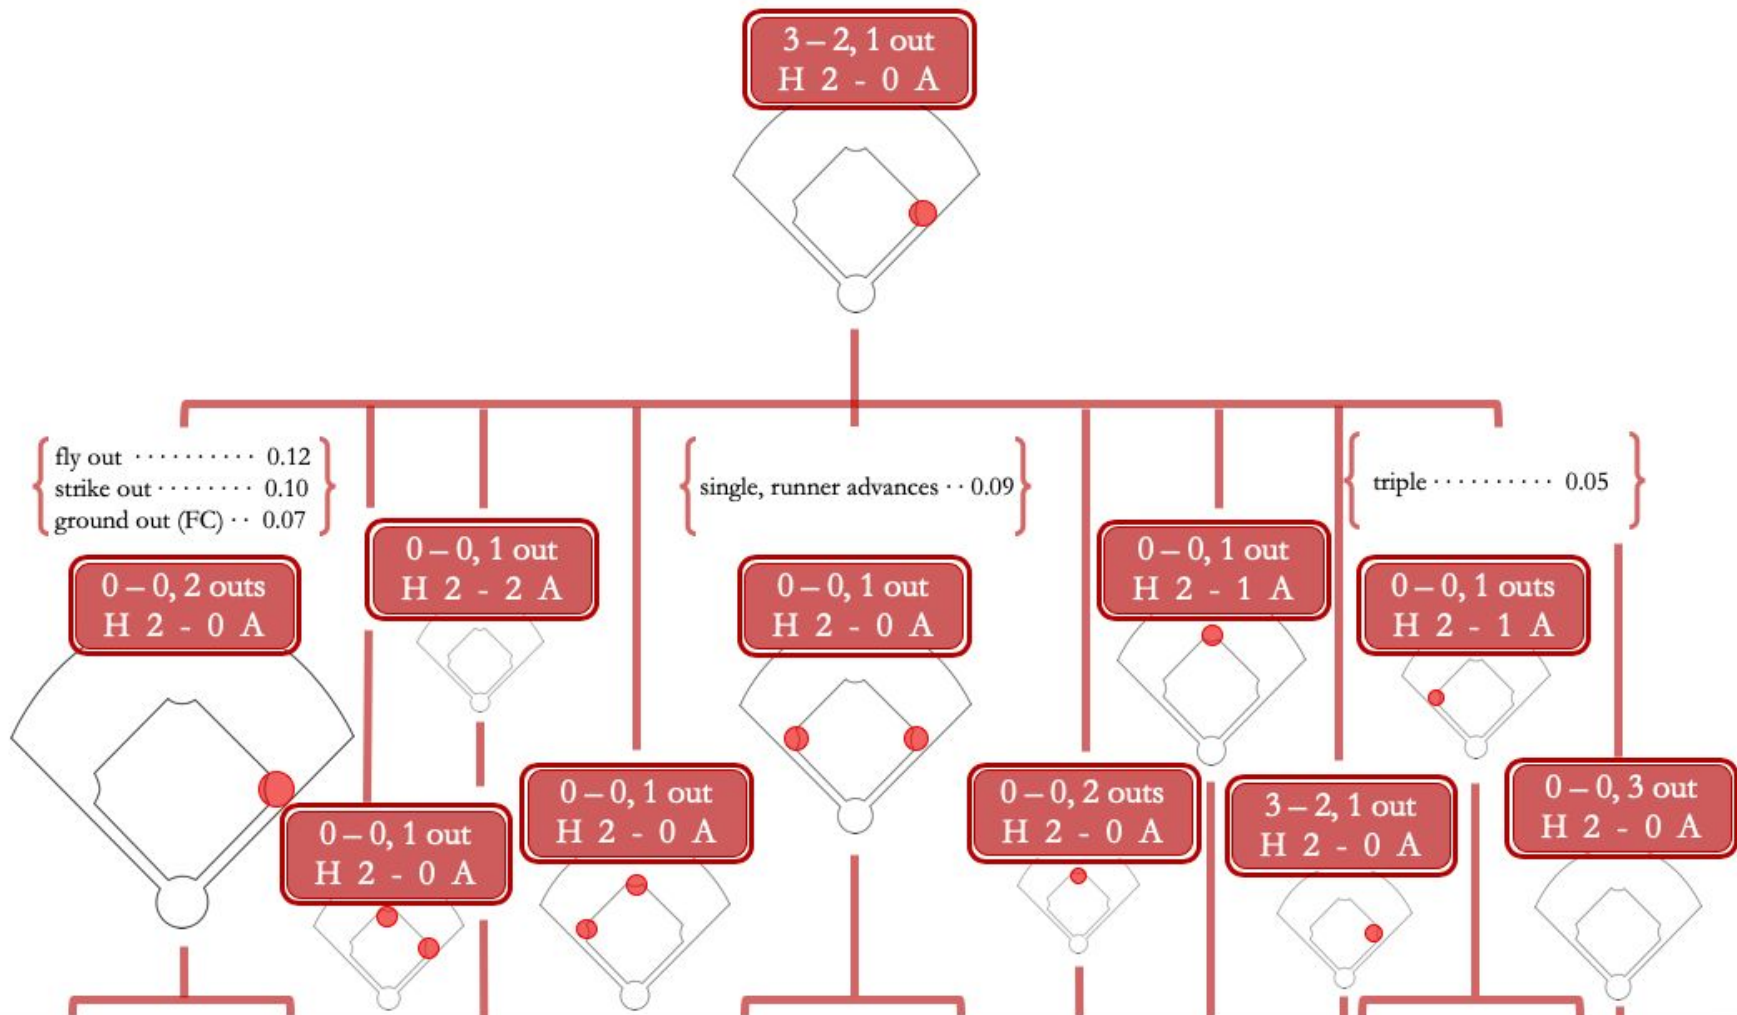

0 - 0, 1 out  
H 2 - 0 A

0 - 0, 1 outs  
H 2 - 1 A

# Predictive Model Results

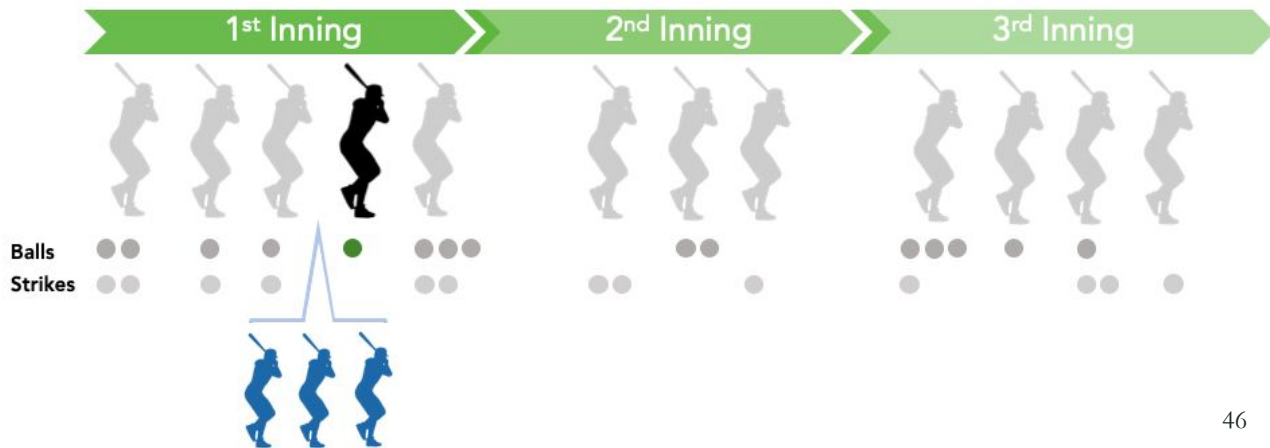

---

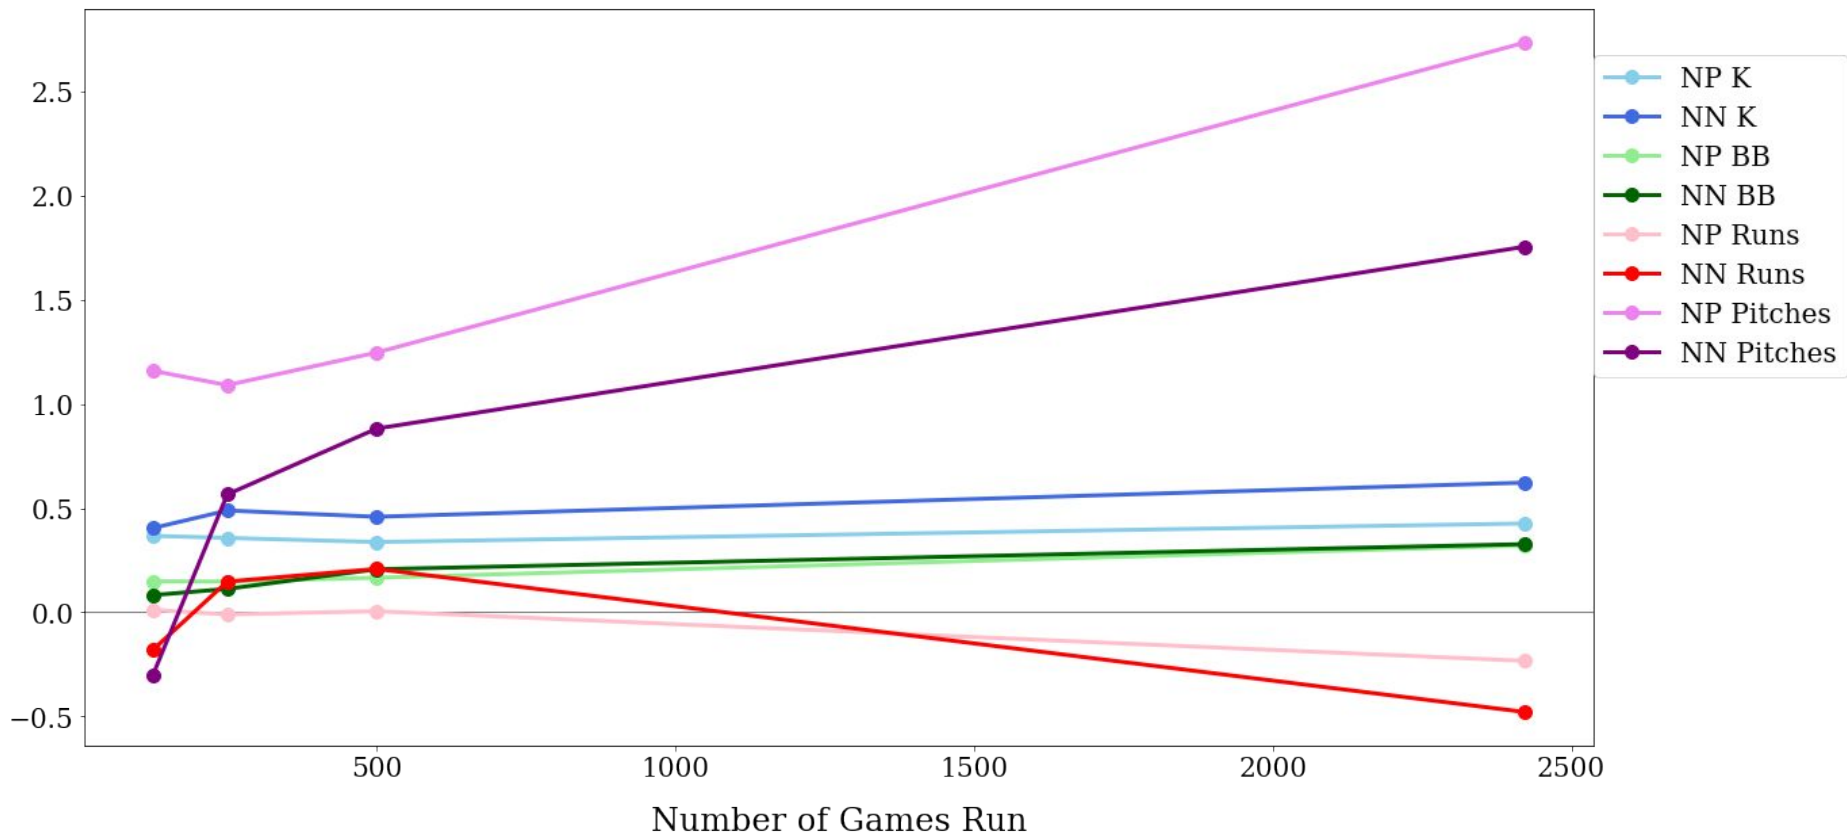

# Original Innings

vs.

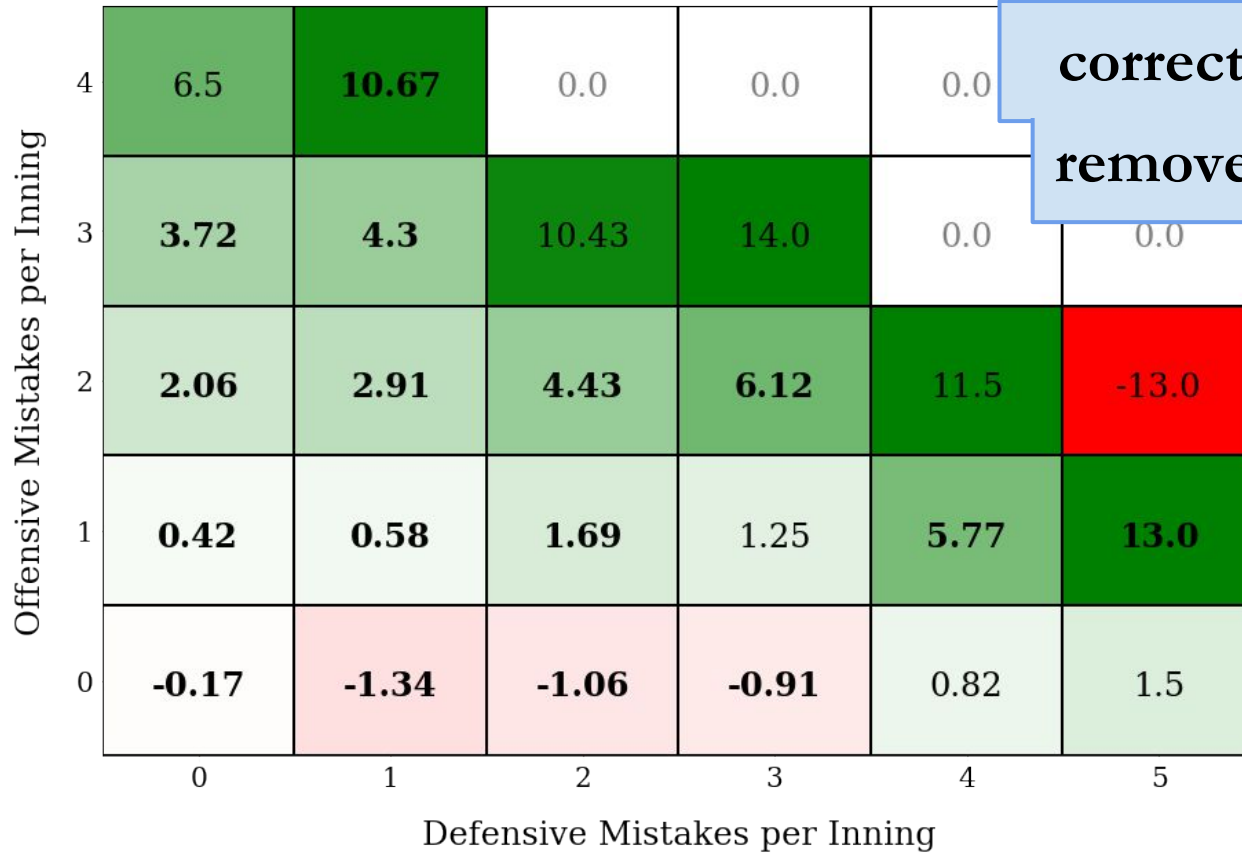

# Corrected Innings

Metric Delta vs. Number of Games

## Difference in Pitches

correcting mistakes can  
remove pitch advantage

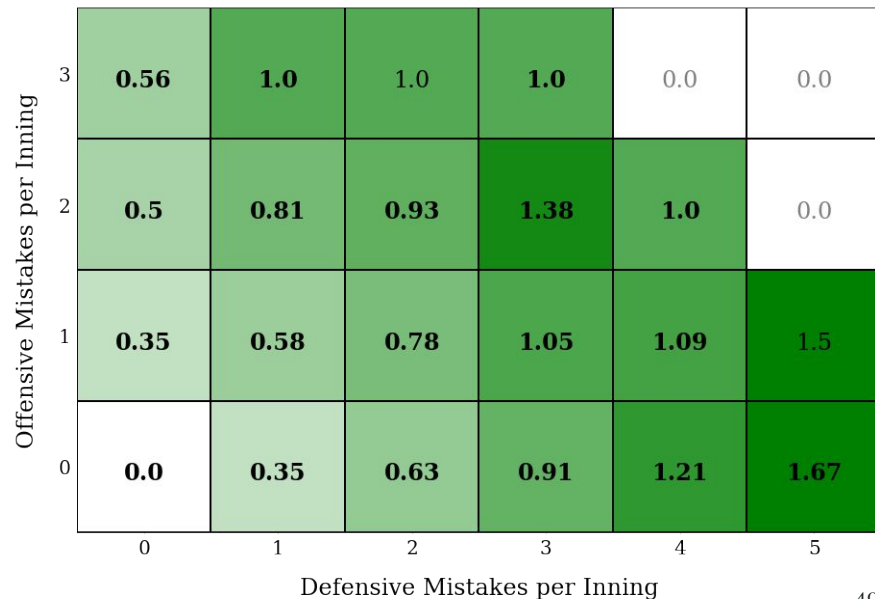

**Difference in Walks**

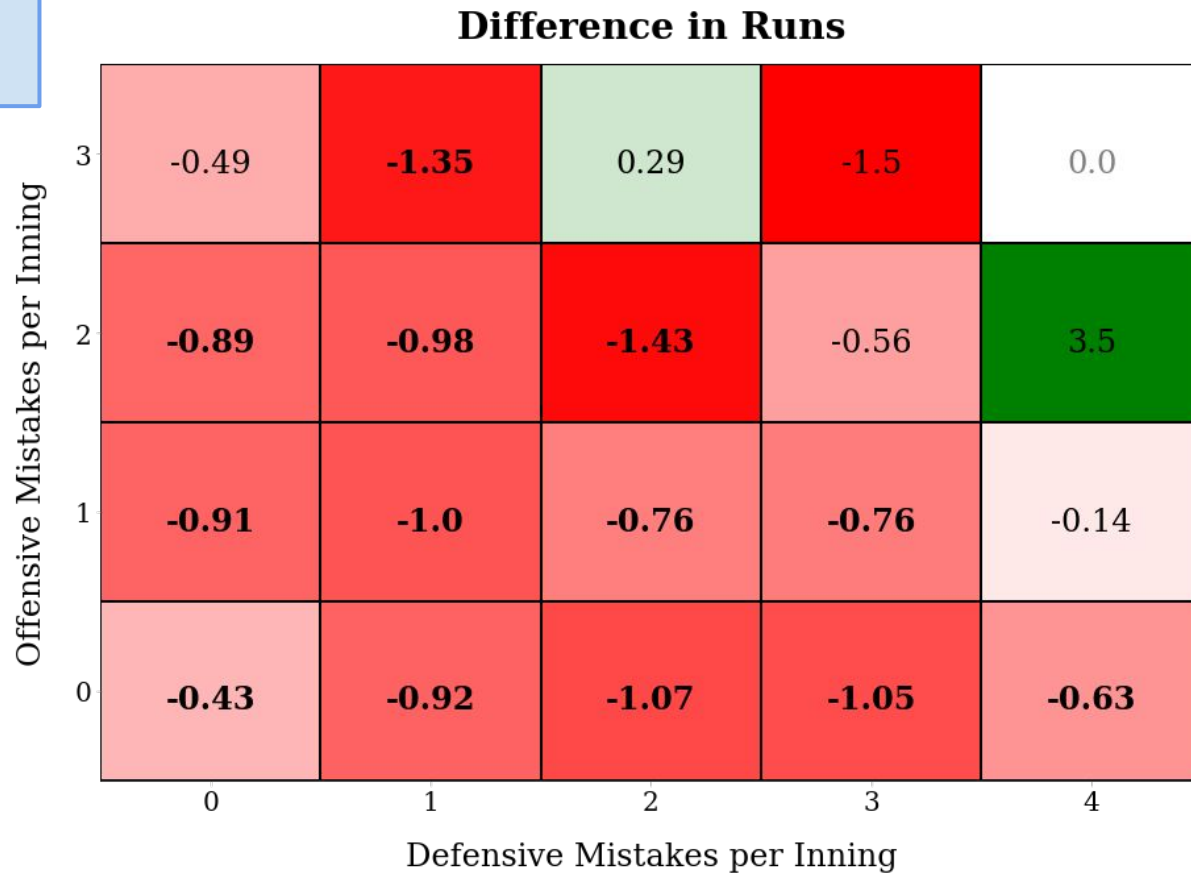

**similar decrease in walks  
across all corrections**

**fewer strikeouts when  
correcting defensive mistakes**

**Difference in Strikeouts**

consistent increase  
in runs scored

# Future Work

---

# Future Work

- Full implementation
- Game manipulation
  - Size and shape
  - Consistency
  - Desired outcomes

What do we want the  
game of baseball to  
look like?

questions?
