

Operations Research Call for Papers:

**Special Issue on Information and Decisions in
Social and Economic Networks**

Eddie Anderson

University of Sydney Business School, University of Sydney, NSW 2006 Australia

David Gamarnik

Sloan School of Management, Massachusetts Institute of Technology, Cambridge, MA 02139 -4307

Anton Kleywegt

School of Industrial and Systems Engineering, Georgia Institute of Technology, Atlanta, Georgia 30332

Asuman Ozdaglar

Electrical Engineering and Computer Science Department, Massachusetts Institute of Technology,
Cambridge, MA 02139

Networks have become increasingly pervasive in our lives: social networks not only have a defining impact on consumer choice but are also central in social and political decisions, ranging from political discourse in the blogosphere to the organization and coordination of protests in the Arab spring. Economic and financial transactions also increasingly occur over large, complex, dynamically changing networks, which not only contributes to the efficient allocation of resources, but also occasionally creates large, systemic, and poorly understood risks. Similarly, network effects are now seen as major elements in healthcare, smart power grids, urban transportation, and more.

We invite high-quality submissions in social and economic networks, construed broadly to include any system in which human action and control play a major role. We welcome contributions based on rigorous mathematical models, as well as empirical

and simulation studies, that contribute to the understanding of network formation, cascades, reliability, information and action propagation, decision making, inference, measurement, and efficient optimization algorithms over networks. We seek papers that apply tools from operations research, statistics, computer science, applied mathematics, and physics to offer novel insights, build new models and possibly provide recommendations to policymakers.

Deadlines

July 1, 2013: Submissions due.

To submit your paper, go to the *Operations Research* ScholarOne Manuscripts site at <http://mc.manuscriptcentral.com/opre> and follow the instructions provided.

July/August 2015: Expected issue publication date.
