

I collaborated with no one.

## Teleport Heuristic Evaluation

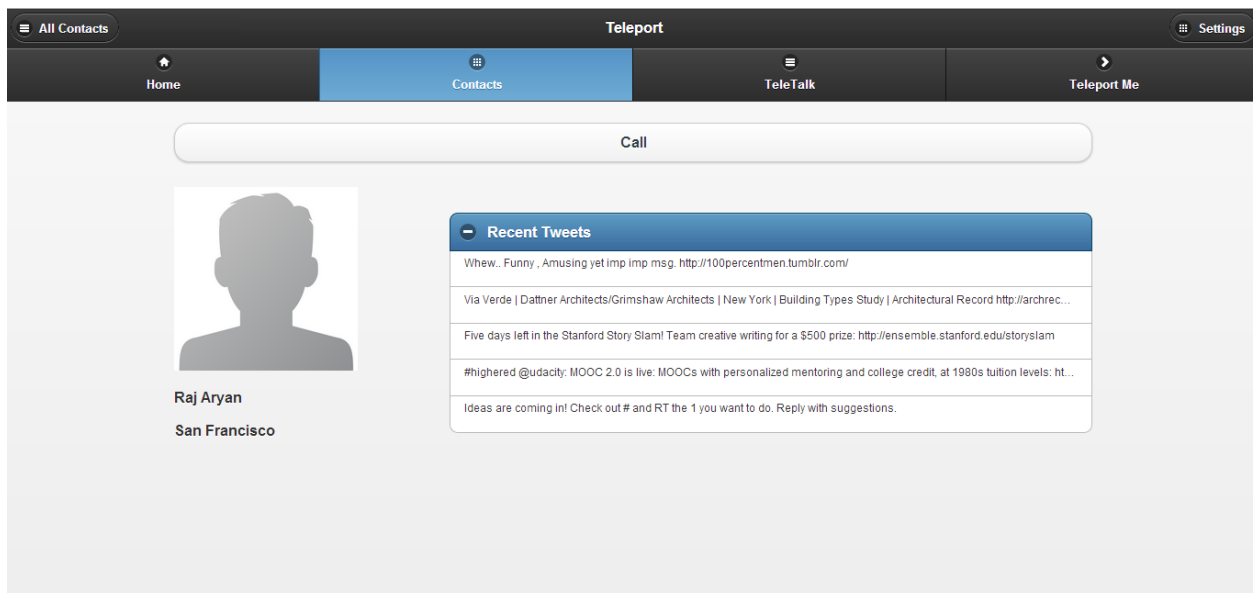

1. I like that there is autocomplete. It increases efficiency and decreases errors by decreasing the number of contacts a user has to look through. Good.
2. I like that autocomplete is visual rather than text based. It also implements the “recognition not recall” Heuristic. Good.
3. I like that the status is displayed (Online or not), and that clicking the person takes you to their profile. It has good learnability and is consistent. Good.

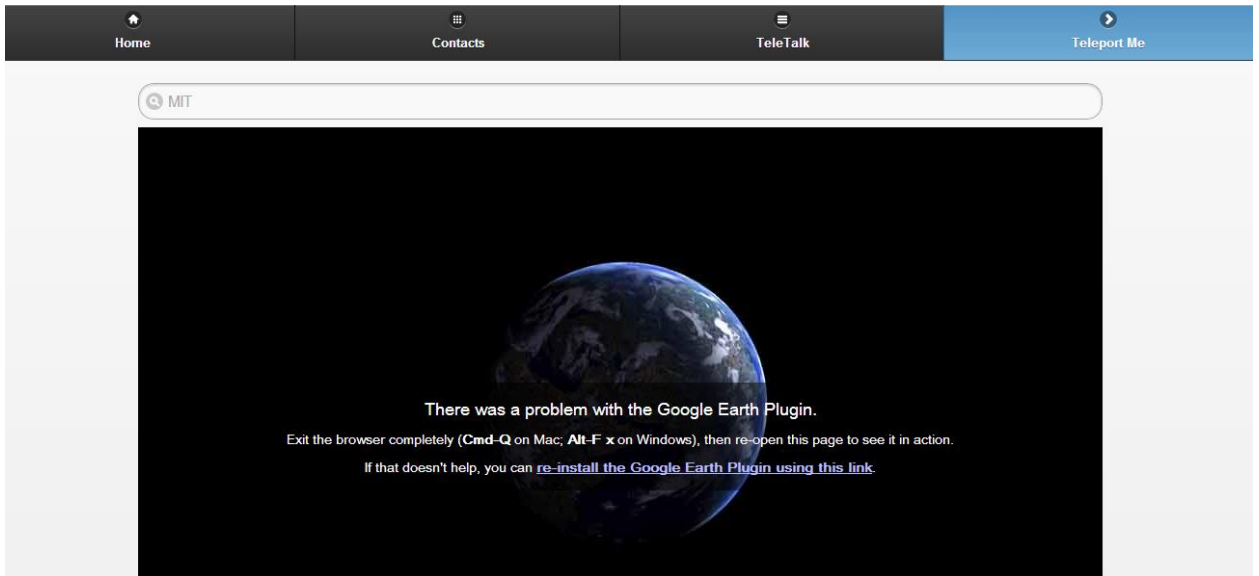

4. No intuitive way to turn chat off. Doesn't help with error prevention and doesn't model real world. Catastrophic.

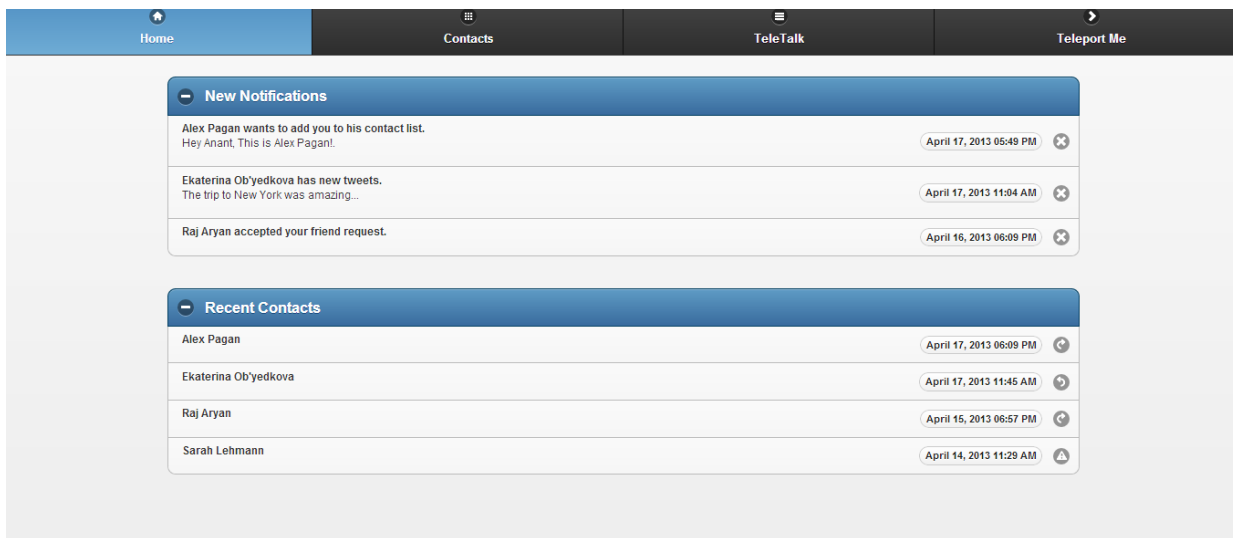

5. Chat continues through screens. I'm not sure if this is a feature or a bug, but it should be toggled off somehow. Major, but can be fixed if number 4 is fixed.
6. Options only displayed via right click. Not intuitive and bad learnability. Major.
7. This wasn't listed in the limitations, but chat will automatically have you talk with whoever is on. When there's no way to turn chat off, it gets awkward. Don't have a screen shot because it was awkward to see the other person. Minor, as I assume this will be fixed when implemented further.

8. Profile is intuitive and simple. Consistency heuristic met. Good.
9. Online status doesn't show anymore. This is important if I wanted to call them. Minor.
10. "All Contacts" only appears on a contact page. This is good, but it breaks the consistency heuristic because it appears on the header bar, where it then disappears from. Cosmetic.

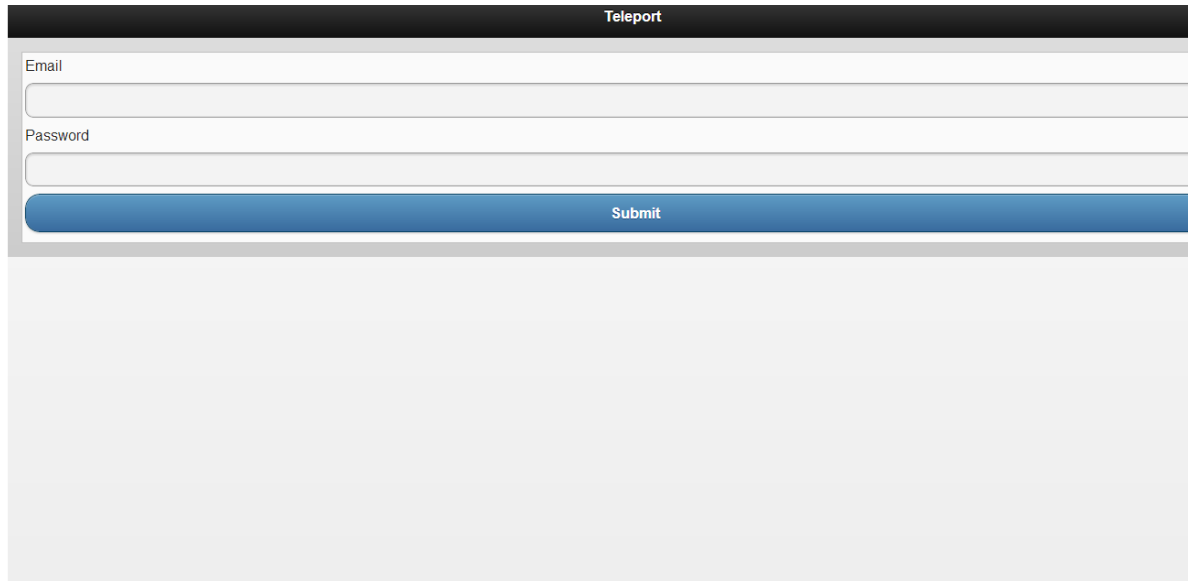

11. This didn't crash for me. I'm not sure what can be done about that. Error reporting heuristic not met as these aren't really helpful suggestions. Minor.

12. Good home page. Notifications and recent contacts should be the first thing they see. Intuitive and simple layout. Consistent. Good.

13. The icons next to recent contacts are not clear at the moment. Why are they different? Low learnability. No help or documentation. Minor.

14. The recent contacts are efficient, as they take you straight to the profile. Consistent. Good.

The image shows a login form titled "Teleport" in a dark header bar. Below the header, there are two input fields: "Email" and "Password". The "Email" field is a simple white box with a light gray border. The "Password" field is a white box with a light gray border and a small eye icon on the right side. Below the password field is a blue "Submit" button with white text. The form is set against a light gray background.

15. Log in page gave no description of site. I had to read the page to know what was going on. Log in was intuitive, but should really let user know what they are logging in to. Help and documentation Heuristic. Cosmetic.
